Nov 1, 2018 UTorrent (software) (help / info / about) Category: SoftwareThe field of the disclosure relates generally to a modular unit system for deployment to a structural surface and, more specifically, to a modular unit system for stabilizing the structural surface through the controlled application of friction and/or weight to the structural surface. Many known systems for stabilizing structural surfaces are secured to the structural surface using hardware, such as bolts, nails, or other fasteners. The hardware can create an undesirable appearance on the structural surface, leave unsightly holes or gaps, or damage the structural surface. If holes are made in a structural surface, moisture can become trapped in the holes and damage the surface. Moreover, such hardware that extends from the structural surface tends to be an eye sore, and detracts from the appearance of the structural surface. Some known systems for stabilizing structural surfaces include pads attached to the structural surface using fasteners that grip the structural surface. The pads, however, must be affixed to the structural surface using fasteners, which can create an undesirable appearance and may damage the structural surface. Further, in some known systems for stabilizing a structural surface, the pads must be affixed to the structural surface using fasteners and may be difficult to affix because the fasteners must be driven into the structural surface.Q: How would I use a button to adjust a value of an element?
